Fragmented files Contiguous files Unmovable files Free space

[Defragg Ideal Free Space](#)

Automatic HFS+ defrag work only with less than 20MB files, and only if you have enough continuous free space.. (Yes, I saw that!)

In this case, you want to defrag your file, especially when your 400MB mov file is split in 1472 fragments.. Going to SSD is a good idea for a startup disk, but not if you need TB of storage for media creation.
